Borowsky

Could I mispose as you for a moment &
thought - which drug companies
(not necessarily Merck) might be
sufficiently interested in polypeptide
antibiotics / anticancer to gamble
even a few thousand \$ support
for her? She was "approved but
not funded" by NIH; and in
my view is underrated both by NIH
& her peers here. You may know
her as one of Ed Tatum's proteges -
(she discovered edeine).
